

# MULTIWALL POLYCARBONATE SHEETS

## **VIRTUALLY UNBREAKABLE**

Impact strength is 200 times greater than glass and 10 times greater than acrylic.

## **CONDENSATION CONTROL**

A factory applied condensation control is available on 8 mm Macrolux panels. Allows water to spread into a thin sheet rather than form into droplets.

## **EASY TO INSTALL**

Macrolux won't crack or split when cut or drilled.

## **TRANSPARENT**

Offering up to 83% light transmission in clear (custom colors available by special order).

## **LIGHTWEIGHT**

Just one-eighth the weight of glass, polycarbonate panels are self supporting and do not require the extensive structural support that a heavier glass wall or glazing material needs.

## **HIGHLY FLEXIBLE**

Can be readily cold formed to many bending radii and can be fabricated on site to precise dimensions.

## **SAVES ENERGY**

The multiwalled construction gives excellent thermal insulating values while blocking UV transmission.

## **WARRANTY**

Macrolux is backed by an extended 10 year warranty on light transmission and breakage caused by hail with completed warranty registration form.
