

PRO-MIX® HP, with its high perlite content, provides a growing environment which benefits growers looking for significant drainage capacity, increased air porosity and lower water retention. The added benefit of a fibrous peat moss and coarse perlite makes this formulation ideal for growers demanding a superior quality product adapted to their needs for watering flexibility and crop seasonality.

Balance and precision are essential in horticulture even more so at the beginning of a crop. PRO-MIX® PGX is formulated with vermiculite to provide added nutrients at the early development stages. This carefully developed formulation will optimize growth and create a growing environment that is adapted for plugs and germination purposes.

PRO-MIX® BX offers a solution for growers seeking the benefits of vermiculite for improved nutrients availability and a perlite content providing limited but proper drainage capacities. Combine with high quality fibrous peat moss, this formulation is ideal for growers looking for a general purpose medium which creates well balance growing environment.

Formulated with an aged pine bark, PRO-MIX® BRK is nitrogen stabilized and therefore well suited for growers who require more frequent dry down periods and have to compose with a changing growing environment. PRO-MIX® BRK is a carefully design low water retention growing medium which will provide quality and consistency for great results.
