

A precision strike against aphids and whiteflies

Endeavor® insecticide works fast to control aphids and whiteflies across a wide-spectrum of ornamentals. Its unique mode of action works well in pest control rotational programs and helps quickly stop insect feeding, which can prevent virus transmission within plants. Additionally, Endeavor is highly compatible with beneficial insects, making it an ideal tool for integrated crop management (ICM) programs.

Active Ingredient: Pymetrozine – 50% Package size available: 6 x 2.5oz.

Flagship 0.22 G is a fast-acting systemic insecticide, labeled for ornamental crops. The granular formulation is convenient for mixing with growing media and pot-to-pot applications. It can be applied as a soil broadcast or banded application at the rates of 40 to 120 lbs/acre. Highly soluble, Flagship G is translocated throughout the plant faster than other insecticides, controlling pests on contact and through ingestion for fast results. Flagship 0.22 G contains 0.035 oz of active ingredients per pound of formulated products, and is packaged in 25 lb bags. Flagship 0.22 G provides residual protection of up to eight weeks and is gentle on beneficial insects. The new formulation provides the same protection and speed of control as the familiar wettable granule (WG) formulation. It effectively controls a broad spectrum of foliar and soil pests, including aphids, whiteflies, and mealybugs.

Active Ingredient: Thiamethoxam – 25% Package size available: 25 lb bags
